

## Reaching the Score of 100% TPM, Semen Gresik's Operation Gets More Excellent

**Rembang, Friday, October 16, 2020** - PT Semen Gresik (SG) held 'Total Productive Maintenance (TPM) Awards for Quarterly Performance Q3 - 2020' intended to all the best implementor members. Head of the SG's Production and Maintenance Department, Ahmad Zulaihan said that this award was a form of support and appreciation from the management for the TPM activities that had taken place at the Rembang factory, Central Java.

"Thanks to the management support and participation of all Semen Gresik employees, the target score of TPM in 2020 can be achieved 100 percent, " said Zulaihan, Friday (16/10).

He continued, Semen Gresik implements the TPM program by optimizing effectiveness, minimizing disturbances from the beginning, focusing on 5R namely (*ringkas* (concise), *rapi* (neat), *resik* (clean), *rawat* (caring), and *rajin* (diligent), autonomous maintenance, planned maintenance, and focus improvement by involving all employees in the production directorate rank.

Semen Gresik, as part of PT Semen Indonesia Group (SIG), according to Zulaihan, has outlined to implement TPM as an effort or method to achieve superior targets in controlling the factory operations. "As one of the cement business units within the scope of GIS, of course, PT Semen Gresik has a high commitment to implementing TPM," he said.

He added, in the midst of increasingly tight competition in the cement industry and oversupply, the TPM program was essential for SG. Because by implementing a good TPM, it is expected that production equipment is properly maintained and can operate according to procedures. "So, it supports the achievement of efficient production costs and utilization of factory equipment in optimal conditions," said Zulaihan.

The direct impact that can be seen from the implementation of TPM, said Zulaihan, is a more manageable and organized work area and production equipment. Therefore, it can increase the employees' comfort/security in working in the field.

According to the TPM officer of Semen Gresik Wahyu Saptadi Sampurno, the excellence of this program is that it can make all personnel or employees at any level, as long as they are still in the production directorate, care and take part by forming a small group activity (SGA) which plays an active role in improving performance in the area.

"So, previously, things were only handled by the production operators sectorally, now with the existence of SGA with the cross-functional, previously the effectiveness and productivity of the production process increasingly improved," said Saptadi.

The implementation of the TPM program, he continued, makes all personnel more flexible in collaborate to solve problems that arise. Thus, if these problems can be resolved early, productivity will increase.

"By implementing TPM, the availability of equipment increases and problems are quickly resolved, so that in the end, operations will be more optimal and efficient," he said.
